

## M-Type

The M-Type is a fixed tilt aluminium structure to provide a medium level ground mount system for banks of solar modules in 2 or 3 rows with the modules in portrait orientation. Any number, type and size of module can be used as these structures are manufactured to suit your requirements. Fixed tilt angles between 10° - 50° are available throughout the range.

The structure kits are supplied with all required fasteners in A4 stainless steel and a complete installation manual. The minimum height requirement at the lowest point can be selected at the initial design stage. The aluminium frames provide an easy to install, light weight option for both off-grid and grid connected systems.

### Product Information

- Material/Finish: 6082-T6 Aluminium
- Fasteners: A4 stainless steel
- Tilt Angles: 10° - 50° (fixed)
- Suitable for: Most modules
